Foreword

Admittedly, the notion “intelligence or intelligent computing” has been around us for several decades, implicitly indicating any non-conventional methods of solving complex system problems such as expert systems and intelligent control techniques that mimic human skill and replace human operators for automation. Various kinds of intelligent methods have been suggested, phenomenological or ontological, and we have been witnessing quite successful applications. On the other hand, “Soft Computing Techniques” is the concept coined by Lotfi Zadeh, referring to “a set of approaches of computing which parallels the remarkable ability of the human mind to reason and learn in an environment of uncertainty, imprecision and partial truth.” Such a notion is well contrasted with the conventional binary logic based hard computing and has been effectively utilized with the guiding principle of “exploiting the tolerance for uncertainty, imprecision and partial truth to achieve tractability, robustness and low solution cost.” The soft computing techniques are often employed as the technical entities in a tool box with tools being FL, ANN, Rough Set, GA etc. Based on one’s intuition and experience, an engineer can build and realize human-like systems by smartly mixing proper technical tools effectively and efficiently in a wide range of fields. For some time, the soft computing techniques are also referred to as intelligent computing tools.

Though these intelligent and soft computing techniques have been found to be very effective in describing and handling relatively simple human-related systems, we find that the existing theories and related conceptual foundations on soft and intelligent techniques need to be further improved and advanced to cope with the very complex nature of “human,” the crux of the human in the loop system. We observe that the characteristics of “human”, in view of human robot interaction, for example, is time varying, inconsistent, high dimensional, susceptible to noise, ambiguous, subjective and local. In particular, we find that the notion of “approximation” needs to be made more precise as we use those soft computing tools in a mixed way. One of the powerful directions is suggested by those scholars working on “quantitative logic.” As a logic that is more mathematical than verbal, the quantitative logic combines the mathematical logic and the probability computation in a way to provide a graded approach to many-valued propositional logic and predicate logic

systems as well explained in a seminal paper by G. J. Wang and H. J. Zhou in Information Sciences. I am very glad to learn that this edited volume is intended to include research results on quantitative logic and other theoretical studies on soft computing, especially including several important theoretical expeditions by renowned scholars such as G. J. Wang and H. J. Zhou, E. P. Klement, R. Mesiar and E. Pap, V. Novak, I. Perfilieva, W. K. Ho, D. S. Zhao and W. S. Wee, Paul P. Wang and C. H. Hsieh, etc.

It has been my honor to review of the volume and comment on this important contribution to the area of intelligent and soft computing. I am very sure that this edition will be a valuable addition to your list of references.

Preface

This book is the proceedings of the 2nd International Conference on Quantitative Logic and Soft Computing (QL & SC 2010) from Oct. 22-25, 2010 in Xiamen, China. The conference proceedings is published by Springer-Verlag (Advances in Intelligent and Soft Computing, ISSN: 1867-5662).

This year, we have received more than 165 submissions. Each paper has undergone a rigorous review process. Only high-quality papers are included. The 2nd International Conference on Quantitative Logic and Soft Computing (QL & SC 2010), built on the success of previous conferences, the QL & QS 2009 (Shanghai, China), is a major symposium for scientists, engineers and practitioners in China to present their updated results, ideas, developments and applications in all areas of quantitative logic and soft computing. It aims to strengthen relations between industry research laboratories and universities, and to create a primary symposium for world scientists in quantitative logic and soft computing fields as follows:

- 1) Quantitative Logic.
- 2) Fuzzy Sets and Systems.
- 3) Soft Computing.

This book contains 83 papers, divided into five main parts:

In Section I, we have 7 papers on “Keynote Speakers”.

In Section II, we have 24 papers on “Quantitative Logic”.

In Section III, we have 25 papers on “Fuzzy Sets and Systems”.

In Section IV, we have 27 papers on “Soft Computing”.

In addition to the large number of submissions, we are blessed with the presence of seven renowned keynote speakers and several distinguished panelists and we shall organize workshops.

On behalf of the Organizing Committee, we appreciate Jimei University and Shanxi Normal University in China, and International Fuzzy Mathematics Institute in USA. We are grateful to the supports coming from the international magazines published by Springer-Verlag GmbH. We are showing gratitude to the members of the Organizing Committee and the Program Committee for their hard work. We wish to express our heartfelt appreciation to the keynote and panel speakers, workshop organizers, session chairs, reviewers, and students. In particular, we are thankful to

the sponsors of the conference, namely, Xiamen Ropeok Science and Technology Co., Ltd, Xiamen Smart Technology Development Co., Ltd, Xiamen Feihua Environment Protective Material Co., Ltd., ChinaSoft International Limited and Pay Seng Koon Mathematics Science Activities Fund. Meanwhile, we thank the publisher, Springer, for publishing the QL & SC 2010 proceedings as J. Advances in Intelligent and Soft Computing (AISC). Finally, we appreciated all the authors and participants for their great contributions that made this conference possible and all the hard work worthwhile.

Contents

Keynote Speakers

Learning Structure of Human Behavior Patterns in a Smart Home System	1
<i>Zeungnam Bien, Sang Wan Lee</i>	
Modeling the Degree of Truthfulness	17
<i>Paul P. Wang, Chih Hsun Hsieh</i>	
A Nonlinear Integral Which Generalizes Both the Choquet and the Sugeno Integral	39
<i>Erich Peter Klement, Radko Mesiar, Endre Pap</i>	
On Virtues of Many-Valued (Fuzzy) Type Theories	53
<i>Vilém Novák</i>	
Semilinear Space, Galois Connections and Fuzzy Relation Equations	71
<i>Irina Perfilieva</i>	
Quantitative Logic: A Quantitative Approach to Many-Valued Logics	81
<i>Guo-jun Wang, Hong-jun Zhou</i>	
D-Completions of Net Convergence Structures	93
<i>Weng Kin Ho, Dong-sheng Zhao, Wen Shih Wee</i>	

Quantitative Logic

Modal R_0-Algebra-Valued Modal Logic System ML^*	111
<i>Hui-Xian Shi, Guo-Jun Wang</i>	

Deduction Theorem for Symmetric Cirquent Calculus	121
<i>Wen-yan Xu, San-yang Liu</i>	
Equilateral Polygons in Classical Logic Metric Space	127
<i>Ming-Di Hu</i>	
Reflexive Transformation in L^*-Logic Metric Space	135
<i>Qing-Ping Wang, Guo-Jun Wang</i>	
A Quantitative Analysis of Rough Logic	145
<i>Yan-hong She, Guo-jun Wang</i>	
Applying Association Rules to ε-Reduction of Finite Theory in Two-Valued Propositional Logic	157
<i>Li-feng Li, Nan Yang</i>	
A Family $I_{LIN(q,p)}$ of Implication Operators and Triple I Methods Based on It	167
<i>Xing-fang Zhang</i>	
The Properties of Normal R_0 Algebras	177
<i>Hua-Rong Zhang</i>	
A Splitting Algorithm Based on Soft Constraints for the Computation of Truth Degree in Quantitative Logic	187
<i>Bang-he Han, Yong-ming Li</i>	
Some Remarks on a Few Approximate Reasoning Patterns	199
<i>Xiao-jing Hui</i>	
The Interval-Valued Truth Degree Theory of the Modal Formulas	207
<i>Bi-jing Li, Guo-jun Wang</i>	
T-seminorms and Implications on a Complete Lattice	215
<i>Hua-wen Liu, Pei-jun Xue</i>	
Reversibility of Triple I Method Based on Łukasiewicz and Goguen Implication	227
<i>Fu-xi Deng, Jun Li</i>	
Random Truth Theory of Proposition Logic and Its Application	233
<i>Jia-lu Zhang</i>	
Soft Set Based Approximate Reasoning: A Quantitative Logic Approach	245
<i>Feng Feng, Yong-ming Li, Chang-xing Li, Bang-he Han</i>	

Left(Right)-Continuity of t-Norms on the Metric Lattice	257
<i>Li-na Ma, Shuo Liu, Guo-jun Wang</i>	
Predicate Formal System $\forall \mathcal{U}\mathcal{L}_{h \in (0,1]}^\Delta$ and Its Completeness	263
<i>Ying-cang Ma, Huan Liu</i>	
The Degree of the Quasi-similarity and the Pseudo-metric between Predicate Formulae	273
<i>Xiao-yan Qin, Yi Liu, Yang Xu</i>	
Conditional Truth Degree of a Logic Theory in Two-Valued Propositional Logic System and Its Application	285
<i>Xiang-ni Gao, Guo-jun Wang</i>	
PIMP-Filters of R_0-Algebras	297
<i>Yong-lin Liu, Mei-ying Ren, Qiu-sun Ye</i>	
Quantitative Logic Theory in Gödel System	303
<i>Wen-bin Xu</i>	
Finite Topological Models of Modal Logic Systems S4 and S5	311
<i>Gao-lin Li, Luo-shan Xu</i>	
Researches on (n) Truth Degrees in Modal Logic	321
<i>Mei-hua Cui, Luo-shan Xu</i>	
Lattice-valued Truth Degree in Łukasiewicz Propositional Fuzzy Logic	331
<i>Dong-xiao Zhang</i>	
 Fuzzy Sets and Systems	
Decomposition Theorems and Representation Theorems on the IVIFS	339
<i>Xue-Hai Yuan, Hong-Xing Li</i>	
Approximation of Fuzzy Neural Networks to Fuzzy-Valued Measurable Function	351
<i>Jun Li, Shuai Gao, Bin Chen</i>	
Fuzzy Divergences Based on Tsallis Relative Entropy	359
<i>Lan Rong, Fan Jiu-lun</i>	
Strong-II N_β-Compactness in L-Topological Spaces	369
<i>Chun-yan Zhang, Yan-ping Zuo, Shi-zhong Bai</i>	

Some Notes on K-Harmonic Means Clustering Algorithm ...	375
<i>Xiao-bin Zhi, Jiu-lun Fan</i>	
On Fuzzy Prime Filters of Lattice H Implication Algebras ...	385
<i>Yi Liu, Ling Guo, Xiao-yan Qin, Yang Xu</i>	
Numerical Characteristics of Intuitionistic Fuzzy Sets	395
<i>Zhi-ming Bai, Dao-wu Pei, Min Mao</i>	
The Study of Time Division Scheduling Mechanisms for Zigbee Cluster-Tree Wireless Sensor Networks.....	405
<i>Jian-Ming Chen, Yan Xu, Rui Chang, Guo-Xiu Peng</i>	
Discovery of S-Rough Decision Law and Its Relation Metric	413
<i>Jin-Ming Qiu, Chang-Jing Lu</i>	
On \odot-Ideals and Lattices of \odot-Ideals in Regular Residuated Lattices.....	425
<i>Chun-hui Liu, Luo-shan Xu</i>	
A Fuzzy System with Its Applications Based on MISS	435
<i>Li-jiang Zhuang, Yu-bin Zhong, Yan-qiang Li, Cheng-han Wang, Da-cheng Zeng</i>	
Particle Swarm Optimization of T-S Fuzzy Model	447
<i>Ming Ma, Li-biao Zhang, Yan Sun</i>	
Inverse Limits of Category CL.....	453
<i>Hai-yang Li</i>	
Relative Density Weights based Fuzzy C-Means Clustering Algorithms	459
<i>Jin-hua Chen, Xiao-yun Chen</i>	
A Generalization of the Lowen Functor ω_L	467
<i>Ling-xia Lu, Wei Yao</i>	
Remote Sensing Image Classification Based on Fuzzy Entropy Triple I Algorithm	473
<i>Jun Yan, Shui-li Chen, Yun-dong Wu</i>	
Formalized Solutions for Reverse Triple-I under Theory of Truth Degree	483
<i>Dong-li Liu</i>	
Properties of L-Extremally Disconnected Spaces	491
<i>Ji-shu Cheng, Shui-li Chen</i>	

Fuzzy Cluster Analysis of Regional City Multi-level Logistics Distribution Center Location Plan	499
<i>Yong-chang Ren, Tao Xing, Qiang Quan, Guo-qiang Zhao</i>	
The Establishment and Reliability Analysis of the Majorized Model of a Kind of Fuzzy Multidimensional Synthetical Decision	509
<i>Xiao-nan Xiao</i>	
$\omega\theta$-Countability in an $L\omega$-Space	519
<i>Zhao-xia Huang, Shui-li Chen</i>	
Using Two-Level Fuzzy Pattern Recognition in the Classification of Convex Quadrilateral	527
<i>Xiang-jun Cui, Bing-yuan Cao</i>	
Moore-Smith $\omega\theta$-Convergence Theory in ω-Molecular Lattices	535
<i>Shui-li Chen, Jia-liang Xie, Guo-rong Cai, Yun-dong Wu</i>	
Some Properties about $L\omega$-Quotient Spaces and $L\omega$-Product Spaces	545
<i>Yu-qun Zeng</i>	
Self-Adaptive Fuzzy PID Controller for Airborne Three-Axis Pan-Tilt	553
<i>Yun-dong Wu, Li-chuan Geng, Qiang Zhang, Shui-li Chen</i>	
ω-Convergence Theory of Filters in ω-Molecular Lattices	561
